

# V5 Control Center Versions

## Express

On premises server deployment that implements the standard features needed to run your inventory, manufacturing, shipping and receiving.

Ideal for smaller single site companies that need to solve batching and inventory issues (inconsistency, poor quality, scrap or wasted products).

Supports limited hardware.

## Professional

On premises server deployment that implements the advanced features needed to run your inventory, manufacturing, shipping and receiving.

Ideal for larger site companies that need to solve batching and inventory issues (inconsistency, poor quality, scrap or wasted products) and advanced warehouse management.

Supports limited hardware.

## Enterprise

On premises server deployment that implements the advanced features needed to run your inventory, manufacturing, shipping and receiving.

Ideal for larger site (or multi site) companies that need to solve batching and inventory issues (inconsistency, poor quality, scrap or wasted products) and advanced warehouse management.

Supports unlimited hardware.

Allows unlimited, real-time exchange data with ERP or Accounting software.

## Implementation Options

The table below is designed to provide guidance on which implementation and services option is right for your business. Our team will work with you to determine the features and options you need and implement the perfect solution for your business.

### Reporting / Analytics

	Express	Professional	Enterprise
Pre-built reports and templates	●	●	●
